## EDUCATION

### Brock University

*Bachelor of Science in Computer Science*

St. Catharines, Ontario

2025

## RELEVANT EXPERIENCE

### Pro Shop Team Lead (Seasonal)

*Grand Niagara GC*

April 2023 – Present

*Port Robinson, ON*

- Designed, built, and deployed a desktop database query application utilizing Java and Swing to automate a manual membership pass verification workflow, increasing processing efficiencies by 95%
- Optimized network-wide hardware layout and facility configurations, diagnosing low-level infrastructure bottlenecks to boost local systemic operational uptime.

### Information Technology Support Technician (Intern)

*Shared Services Canada*

Sep. 2022 – Dec. 2022

*Ottawa, ON*

- Maintained access control compliance across federated systems by creating/modifying enterprise directory structures and implementing **Role-Based Access Control (RBAC)** for auditable security parameters.
- Administered system stability across an enterprise-scale mobility fleet of **100,000+ distributed endpoints** utilizing centralized Mobile Device Management (MDM) orchestration tools.
- Executed automated weekly infrastructure integrity checks on critical staging and production servers to map anomalies, mitigate operational risks, and safeguard federal service continuity.

## TECHNICAL PROJECTS

### Automated Multi-Tenant Web Pipeline | *Python, JavaScript, REST APIs, CI/CD*

2026

- Engineered a zero-dependency, cross-platform automation server in Python using native networking modules ('http.server', 'socket') to provision live Next.js instances within minutes.
- Architected a multi-threaded execution layout with atomic lifecycle status locks ('threading.Lock') to isolate simultaneous repo-cloning, payload injection, and deployment processing jobs smoothly.
- Integrated GitHub and Vercel REST API engines via low-level network requests to orchestrate automated remote repository management, inject localized parameters, and execute targeted production builds.
- Built programmatic headless workspace transformations utilizing native file parsing systems to read, parameterize, and securely update environment records, Git configurations, and static layout directories.

### Gymrocks 🏋️ | *Mobile Developer – Swift, SwiftUI, local-first Architecture*

2026

- Architected and launched an asynchronous mobile training engine onto the Apple App Store, implementing an offline-first storage layout to ensure complete client-side user data privacy.
- Coded an analytical progression execution block implementing double-progression algorithms and lookahead trend tracking to present local per-exercise real-time intensity and weight adjustments.
- Devised a native application deep-linking router scheme enabling dynamic cross-device configuration sharing while configuring scheduled local background notification cycles to increase daily retention.

### CourseMix 📖 | *Full-Stack Engineer – Next.js, TypeScript, Agile/Scrum*

2025

- Engineered a graduation trajectory logic engine processing multi-variant prerequisite trees and structured academic rulesets to track real-time university graduation milestones dynamically.
- Contributed backend feature modules inside an Agile sprint environment, participating in daily sync meetings and codebase evaluations to ship iterable database changes.
- Integrated external Open-Meteo services to establish a climate microservice, constructing interface adapters and data normalization pipelines to serve regional context data.

## TECHNICAL SKILLS

**Languages:** Java, Swift, C, Python, SQL, JavaScript, TypeScript, HTML/CSS

**Frameworks:** React, SwiftUI, Node.js, Next.js, Java Swing

**Developer Tools:** Git, GitHub API, Vercel API, Multi-Threading, Jira, Agile/Scrum, UNIX/Linux
